Smart Report

Economic and fundamental developments 7 – 8 – 2025

- The US Dollar Index stabilized near the 98.27 level, while gold prices rose to around \$3,377 per ounce.
- Oil prices advanced during today's session, with Brent trading at \$67.06 per barrel, up by 0.52%, while West Texas Intermediate (WTI) rose to \$64.67, gaining 0.65%.
- The Bank of England has cut its benchmark interest rate by 25 basis points, from 4.25% to 4%, in line with market expectations.

Smart Reports

How they work:

Every day we outline a scenario that our technical analysis suggests has a 60-75% chance of happening. Should this not occur, we offer a second scenario we believe to have 60-75% probability if the first scenario does not happen.

The second scenario comes online only if the price of the security quoted falls below the maximum price given in the second scenario. If this happens, the first scenario is no longer 'live'.

These reports and analysis are not intended to replace your own analysis; independent research is recommended.

XAUUSD 7 August

Trend: Up

Time frame: 60 mins

Current Price: 3379

Scenario one: **Buy** gold around 3370 with a target price of 3400

Alternative: **Sell** gold around 3355 with a target price of 3325

Alternative: **Sell** the Share around 288.69 with a target price of 282.60

Comment: Trading above the support line and moving averages favors the rise

The tools used in this technical analysis today:

Classical technical analysis is the basic of predicting price movements, which is derived from statistical and computational studies. Classical technical analysis is based on price action, peaks and bottoms, along with price channels, support and resistance, and much Fibonacci ratios are used.

Fibonacci ratios for use in the study of price movements, discovered by Leonardo Fibonacci in his statistical and mathematical studies, tested for financial markets and price movements, and gave excellent results for the prediction of wave propagation and wave interruption during the historical test stages.

The exponential moving averages are instrumental in determining price trends and can be followed to identify intersections that cause potential change of direction. In addition, moving averages of different types represent support and resistance.

AROON is a pointer that determines whether the price is moving in a channel or not, and the indicator also identifies potential reversal points in directions and shows how strong the trend is. Consists of the ascending line and the descending line, and their divergence indicates a channel in favor of the upper line between them, and their proximity indicates the possibility of reversal or trading in a weak direction.

The MACD is a momentum and oscillator, and exponential moving averages are used for its calculation, and the convergence and divergence between these averages is calculated. Therefore, one of the most important indicators used to integrate it between the measurement of torque and trends together.

Disclaimer:

Over-the-counter leveraged derivative contracts, including contracts for difference and spot foreign exchange, are complex financial instruments. These instruments come with a high risk of losing money rapidly due to leverage. You should consider whether you understand how these products work, whether you can afford to incur losses and whether you have the appropriate risk appetite. We recommend you seek professional advice before investing.
